PROFILE

Computer engineering student who develops and deploys end-to-end products and seamless data pipelines for full-stack AI platforms.

PROFESSIONAL EXPERIENCE

HALKBANK - Computer Engineering Intern, 07/2026 - 08/2026

- Contributed to software projects focused on analyzing and tracking banking profitability.
- Developed solutions across different scenarios to improve the accuracy and reliability of financial processes.

Airbagsepeti - Freelance Software Developer, 05/2026 - 07/2026

- Built and delivered a unit-level inventory system for an auto-parts retailer: QR-coded item labels, shelf/location tracking, and full stock-movement history now in production.
- Shipped as a complete product with role-based access for warehouse, sales, and management teams and a mobile- friendly PWA used on the warehouse floor.

LC WAIKIKI - Computer Engineering Intern, 07/2025 - 08/2025

- Developed a project improving the visibility and traceability of logistics operations.
- Worked on a system that let tasks be tracked throughout their processing lifecycle.

EDUCATION

Gebze Technical University, B.Sc. Computer Engineering, 2021 - Present

PROJECTS

Social Media Intelligence Pipeline, 2026 - Present

End-to-end system that monitors a curated panel of social media accounts and turns their ephemeral content into brand-collaboration analytics.

- Built and operate an unattended 24/7 collection service with a durable archive, ingesting 10,000+ new content items weekly from a 270+ account panel with full provenance.
- Designed a multi-modal analysis pipeline (visual frames + speech transcription + LLM readers) that detects sponsorships, promo mechanics, and brand mentions at scale.
- Engineered for trust and cost: fully reproducible processing, accuracy measured against human-labeled benchmarks before scaling, and per-item LLM cost tuned ~15× down.

HirePilot, AI Powered Recruitment Platform, 2025 - Present

B2B hiring platform where companies invite candidates to an AI-conducted live interview, and a decision engine scores and ranks them against the job's requirements.

- Built the full product: company dashboard, candidate application flow, real-time AI interview experience, notifications, team invites, and usage quotas.
- Designed a multi-agent interview system separate AI roles plan the interview, ask questions, listen, and adapt in real time to each candidate's answers and CV.

ACHIEVEMENTS & CERTIFICATES

3rd Place – Develhope Datathon 🏆, (2023)

- Achieved 3rd place among 50+ competing teams by developing a Python optimization model for bike rental demand forecasting.

CCNA: Enterprise Networking, Security, and Automation 🏆

CCNA: Introduction to Networks 🏆

SKILLS

Engineering: C, C++, Python, TypeScript, FastAPI, NestJS, Next.js, PostgreSQL, Supabase, Redis, Docker, Git, Linux

AI systems: LLM & multi-agent applications, speech & vision processing, embeddings & vector search, model evaluation & benchmarking
